A natural alternative for the therapy and prophylaxis of Coccidiosis.

Coccidiosis is a parasitical disease due to the protozoa of Coccidia family. Coccidia are parasites of the intestinal mucosa cells and an high number of these protozoa can cause serious forms of diarrhea that sometimes could be also hemorrhagic.

The intestinal mucosa develops a barrier effect against some refusal substances and bacterium present in the intestinal tract. Moreover, on its surface there is an absorption action against the nutritive principles and a re-absorption of the water contained in the intestinal lumen. Coccidiosis alters the correct functionality of this barrier causing:

- the entrance in the blood circulation system of noxious substances and pathogenic bacteria.
- the non-absorption of water and nutritive substances that are eliminated by the feces.

As a consequence, states of sepsis and dehydration sometimes even very serious, occur. The symptomatology is more severe in puppies or in weak subjects especially after stressful events such as the coexistance of different diseases or after a very long travel in bad conditions.

Normally coccidia are present in the environment and only a debilitated animal permits its replication in the organism causing disease.

The excessive use of antibiotics and medicines makes the microbes and parasites ever more aggressive and resistant. On the other hand, the affected organism, gets more and more weak to the external attacks. The solution is to control diseases inhibiting the pathogens and reinforcing the organism’s natural defences, in order that the organism is able to defend itself and to get over without medicines, that usually have side effects.

COCCISTAT PLAN PET has been created with this intention: it is a natural product that helps the animal to receive a correct diet in order to fight Coccidiosis. The total absence of pharmacological substances permits to use the product as preventive purpose especially in the puppies or in those animals with a particular predisposition to take this disease: sick dogs or dogs that have to face stressful events such as travels, expositions, operations, ect. Thanks to its formulation, COCCISTAT PLAN PET, promotes the development of healthy intestinal microflora, improving the absorption of nutrients.

**DIRECTIONS FOR USE**

Mix Coccistat Plan Pet with traditional food. Please, after mixing, do not cook the food otherwise contained nutritive principles would be altered.

**Administration:** 7/10 days.

Daily administration of 1 g/kg body weight up to 22 kg body weight of the subject.

Over 22 kg, the maximum daily dose is 22 g.

(1 teaspoon = 4g; 1 tablespoon = 11g).

**Composition:** aromatic vegetal extracts, oils and fats, minerals, antioxidants.

**Integration per kg:**

Vitamine K 20,000 mg
COCCISTAT PLAN PET

Complementary feed for pets

Vitamine E (α-tocopherol)  2.500 mg

**Analytical values:** moisture 3.0%, 2.0% crude protein, crude fat 50.0%, 0.2% crude fiber, crude ash 30.0%.

**Packaging:** 100 g, 250 g, 500 g, 1 kg, 3 kg, 5 kg.

**Shelf life:** 3 years. The expiry date makes reference to the product in the original package, sealed and stored in a fresh and dry place.
